

NTTA

Construction Manager Acceptance Decision Delegation

The following list represents opportunities extended to the NTTA Construction Manager to exercise Engineering Judgment with respect to corresponding assigned NTTA construction projects.

Specification Issue	Comment
1 Concrete slump deviation from specification	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of acceptance shall be documented with the test result and compiled into a list for attachment to the Letter to the FHWA of Certification of Materials Used, where applicable.
2 Concrete air content not meeting specification requirements	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of acceptance shall be documented with the test result and compiled into a list for attachment to the Letter to the FHWA of Certification of Materials Used, where applicable.
3 Concrete Mix revolutions	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of the acceptance shall be documented with the inspection report.
4 Deviation from specified concrete discharge time	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of acceptance shall be documented with the test result and compiled into a list for attachment to the Letter to the FHWA of Certification of Materials Used, where applicable.
5 Materials not meeting plan or specification density test requirements	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of acceptance shall be documented with the test result and compiled into a list for attachment to the Letter to the FHWA of Certification Of Materials Used, where applicable.
6 Materials acceptance while deviating from optimum moisture requirements	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of acceptance shall be documented with the test

	result and compiled into a list for attachment to the Letter to the FHWA of Certification Of Materials Used, where applicable.
7 Reinforcing steel cover required on plans	The CM may exercise sound Engineering Judgment and accept materials that do not meet the specified requirement. The basis of the acceptance shall be documented with the inspection report.
8 Hot Mix Asphaltic Concrete Pavement Placement Air Temperature	The CM may exercise sound Engineering Judgment to determine acceptable limits of deviation from pertinent specification requirements for air temperature prior to placing mix. The basis of the acceptance shall be documented within the test or inspection report. If documented via material test report, then this result shall also be compiled into a list for attachment to the Letter to the FHWA of Certification Of Materials Used, where applicable.
9 Concrete temperature	The CM may exercise sound Engineering Judgment to determine acceptable limits of deviation from pertinent specification requirements for concrete temperature prior to placing concrete. The basis of the acceptance shall be documented within the test or inspection report. If documented via material test report, then this result shall also be compiled into a list for attachment to the Letter to the FHWA of Certification Of Materials Used, where applicable.
