

The grass is always greener (and the air you breathe is cleaner) on NTTA roadways.

The North Texas Tollway Authority adds a refreshing focus on environmentally friendly and sustainable operations.

Improving air quality:

NTTA's fleet features hybrid, flex fuel and low-sulfur diesel vehicles.

Reducing Traffic Congestion:

NTTA's conversion to all-electronic toll collection eliminates stop-and-go traffic at toll booths.

Protecting Water Resources:

Aggressive storm water management and clean-up programs keep litter and pollutants out of the local water supply.

Enhancing Sustainable Aesthetics:

Uncoated, aesthetically pleasing concrete construction stands up to the elements, minimizes maintenance and eliminates volatile organic compounds.

Xeriscaping Cuts Water Consumption:

Native, drought-tolerant plants and grasses take tiny sips of the water monitored and managed by the smart irrigation system.
